

GM760

Senstec™

Seismic detector

low-profile seismic detector for all applications

- 5 m operating radius on concrete → 80 m² coverage area
- Around-the-clock monitoring of strong-room-walls and doors, safes, night deposits, automatic teller machines, etc.
- Individual settings with SensTool software
- SENSTEC™ Bimorph sensor and micro-controller-based signal evaluation

Versatile in application. The low-profile design makes it easy to install. Predefined settings allow to be quickly set for all common applications. Optional SensTool software enables modification of default operating parameters and monitoring of current detector performance.

Effective. Reliable recognition of attacks is ensured with explosives or attempted entry using modern tools, such as diamond-tipped drills, mechanical and hydraulic pressure tools, flame cutters, thermal-lances or water jet on safes, automatic teller machines, night deposits, strong rooms and modular vaults made of steel, concrete and synthetic composites.

Highly professional. The patented SENSTEC™ sensor and digital signal processing evaluates a selected narrow frequency band to ensure reliable detection. This comprehensive protection is immune to environmental influences including air and structure borne noise from external disturbance sources.
